SUMMARY

I am a MERN Stack Developer. As a MERN Stack Developer, I bring a strong foundation in web development using MongoDB, Express.js, React.js, Bootstrap and Node.js. Proficient in creating responsive and dynamic web applications. I love to develop interactive and user friendly Web Applications.

I develop Mobile apps(React Native) and programs that make life easier for people. I enjoy solving problems using technology and making things work smoothly.

SKILLS & KEY COMPETENCIES

Component-based UI development.	Middleware integration for handling requests and responses.	Database design and management.
State management using hooks, Redux and context API.	RESTful API development.	Indexing and query optimization.
	Server-side JavaScript development.	Proficiency in modern JavaScript features

PROFESSIONAL EXPERIENCE

Dress Code (Ecommerce Website)

Jan 2024 - Feb 2024

I have developed an Ecommerce website name Dress Code. I developed this website using React.js Framework. I developed the whole frontend by using React.js for both Customers and Admin. I developed the Server-Side using Node.js, Express.js and I used MongoDB Database. The website is fully functional. An Admin can sell out any of his clothing brand and a Customer can visit and purchase those products. It is a user friendly website which provides the ease of use for both Admin and Customer.

Portfolio Website

Sep 2023 - Dec 2023

I have developed a Portfolio website using Bootstrap framework. It is also a fully functional website. In this project, my entire focus is at the frontend. I developed this website using some beautiful animation. Using this site, anyone can represent his/her portfolio to others.

University Final Year Project

Nov 2022 - Dec 2023

Table for Everyone (Mobile Application)

I developed an Android application as my Final Year Project at my University. Basically, it is an application for Table Reservation and Order Food from different restaurants. In this project, my proposed system helps users to recommend different restaurants according to their tastes and choices. It provides ease for users to order food or reserve their table in any of the registered restaurants.
